

Macroboost Product Manufacturing

Macroboost Pty Ltd is committed to manufacturing and supplying quality products for Agricultural and Horticultural use.

All formulations go through a fermentation process where nutrients are stabilised and pre-digested by beneficial microbe cultures.

Our “Mother Culture” inoculum, supplied by Multikraft Austria, has organic certification in Europe and Australia, with micro-organisms categorised as “Generally Regarded As Safe” GRAS.

The Humic and Fulvic acid substances are supplied through Multikraft Australia and sourced from Catalyst Product Group, Arizona, USA. These products have OMRI organic certification.

Agricultural nutrients incorporated in the formulations are industry standard fertigation products.

Brian Horsley.
